

# AALTO<sup>®</sup> ARINA

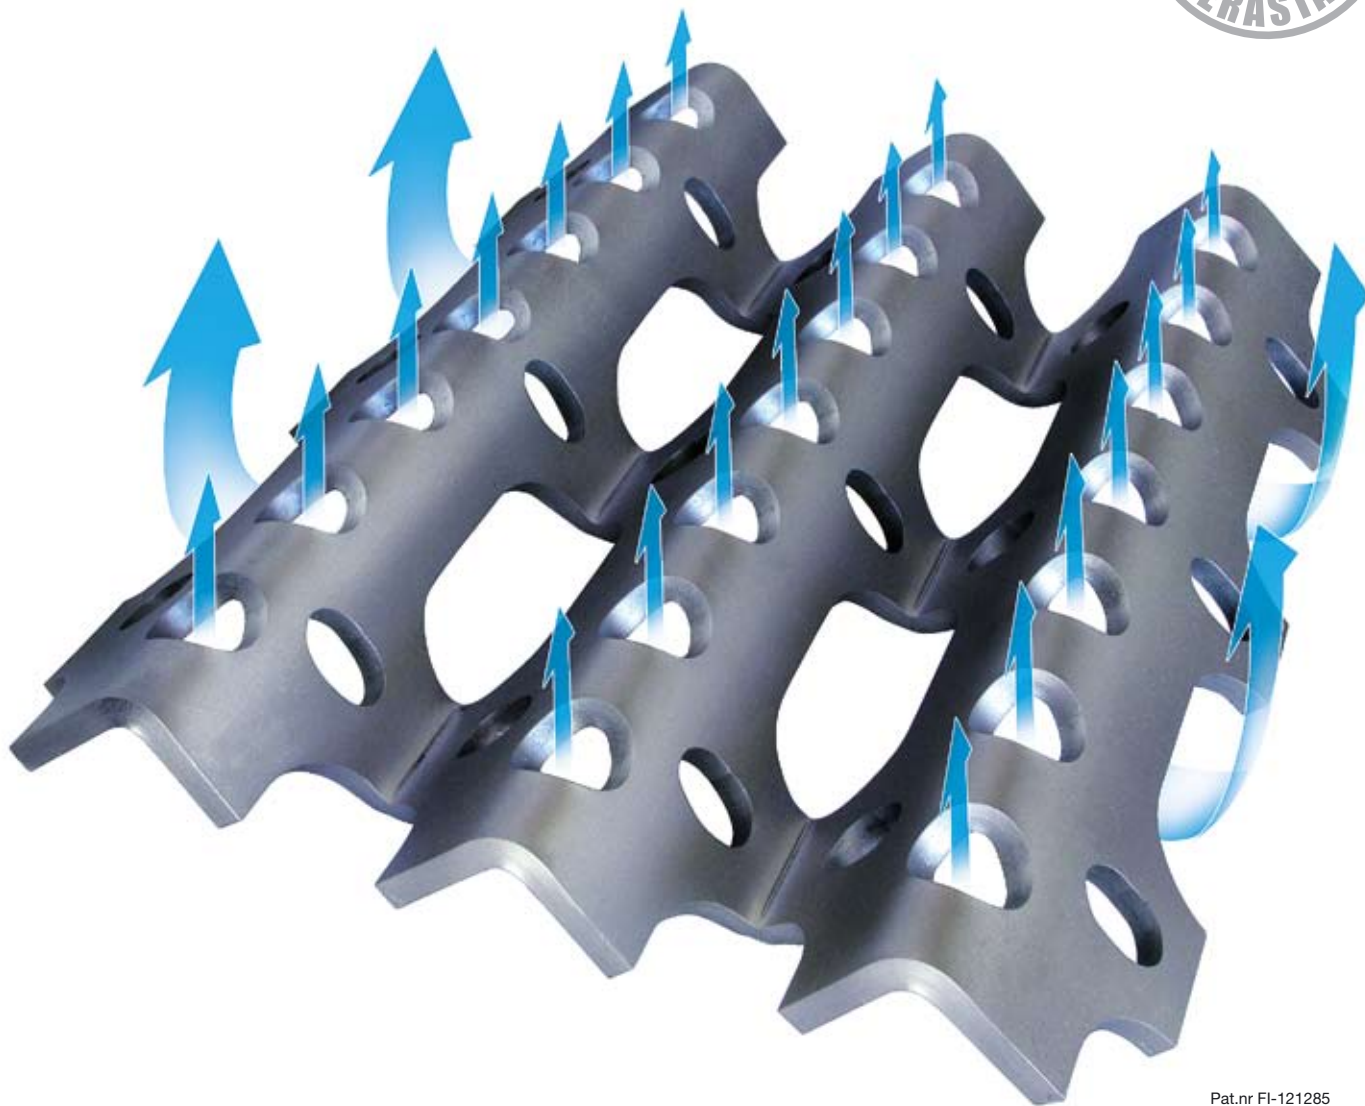

- suitable for all fireplaces
- easier to light a fire
- more efficient combustion
- cleaner fumes
- even build of ash

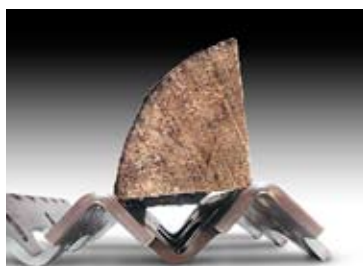

# AALTO<sup>®</sup> ARINA

- suits all fireplaces\*
- available in 1 or 2 piece set
- even several pieces depending on the requirements

**Grate structure helps you to light a fire in an instant!  
The innovative structure and design guarantee sufficient  
air supply and even burning of wooden material.**

Pat.nr FI-121285

Thanks to the wave-like structure, burning wood material stokes itself by dropping down in the grate structure. The same principal applies to ash building: ash flows from the top of the wave to the bottom. Correct-size openings and efficient combustion produce an even build of ash. Grate is manufactured of high-quality Finnish steel.

**Visit our website at [www.aaltoarina.fi](http://www.aaltoarina.fi)**

\* To avoid eventual damages in some fireplace models, consider the effect of the higher efficiency of combustion on the amount of burning wood.
